COMPANY PROFILE

// ABOUT US

// SERVICES

// TEAM

Dabster, a word we encountered by chance, represents us perfectly. Rarely used even by native speakers, it means “an expert in a specific field.”

We’ve made it our own.

Our origins: over 20 years of exceptional intensity dedicated to delving into the themes of technology and energy applied to buildings. An experience built across various fields and environments, throughout Italy, the Middle East, Africa, and Eastern Europe.

Skills: three engineers with three different specializations. Mechanical/Hydraulic, Energy, and Electrical. Three disciplines indispensable to each other. It was time to put all this at the service of our clients and those who wanted to journey with us.

The technological systems: they are the active part of a building with which people interact daily, bringing comfort to our everyday activities within hospitals, offices, homes, industries, schools, hotels, museums, exhibitions, and any other context essential to our lives. They are an important aspect that deserves all possible attention and the necessary care for details, which our engineering services provide to architects and designers, achieving healthy, safe, comfortable, and advanced structures.

Energy savings: a theme of delicate and modern relevance to be applied in every project originating from our offices, significant in every aspect of our design approach.

Cost management: our clients’ economic commitments require adherence to well-defined budgets. We take on the responsibility of

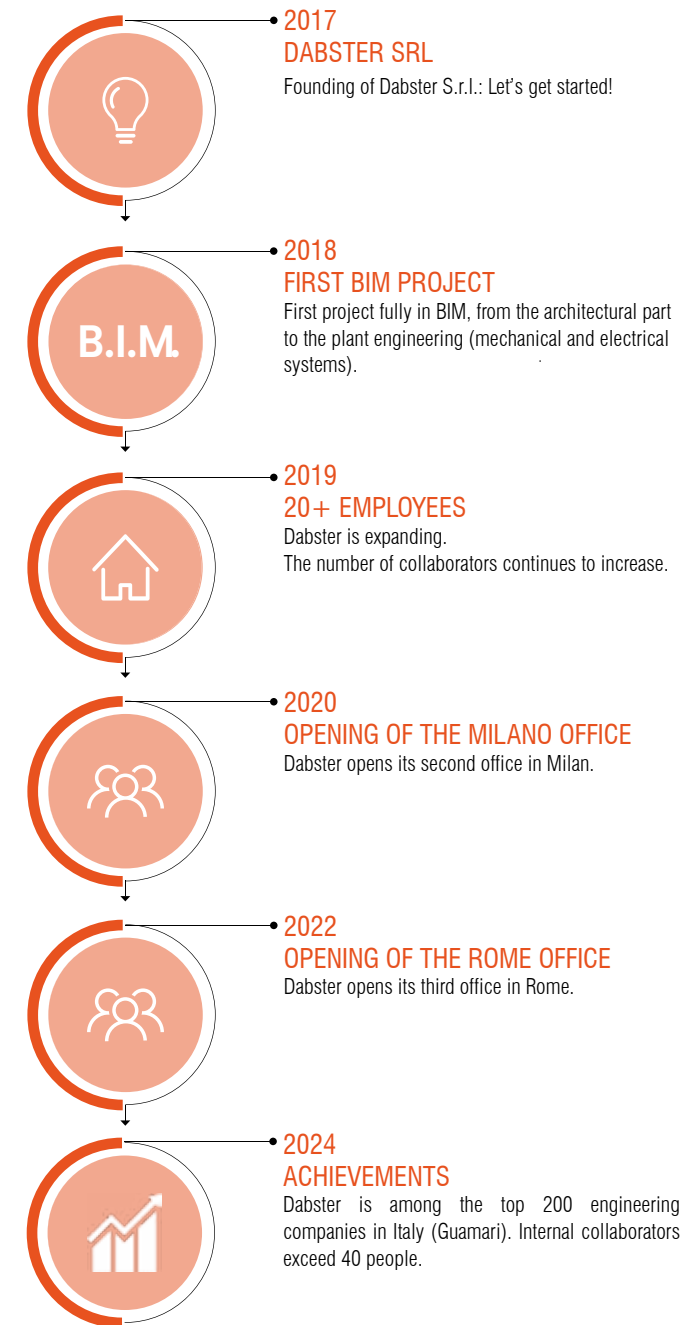

optimizing every type of investment, from the smallest to the largest, both in initial costs and future operational expenses.

Safety: It is a fundamental requirement for human life. It means feeling calm, safe, and protected. Today’s technology can make an enormous contribution to the safety of all of us and is a cornerstone of every project we undertake.

Sustainability: Respecting the environment in which we live means respecting ourselves. The best way to do this is through knowledge of the best technologies in terms of efficiency and effectiveness. We strive to incorporate the highest level of environmental sustainability in every new initiative.

Team: No person is an island, and no project is born from the mind of just one individual. A close-knit group with initiative and dedication at the service of our endeavors is the main ingredient of our daily work.

Quality: It means doing things well when no one is watching

Mechanical Systems

Design of air conditioning systems - sanitary water systems - air treatment - medical gases - exhaust systems - purification - compressed air - special oil-filled diathermic systems - heated water - co & trigeneration - steam production - heated water.

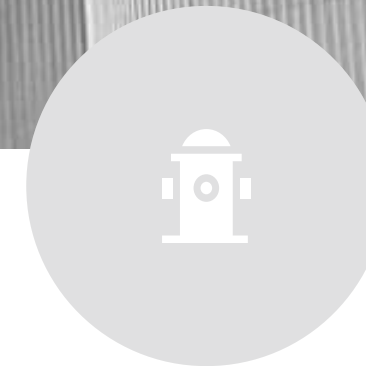

Electrical Systems

Design of electrical systems for motive power, normal and emergency lighting, grounding, medium voltage / low voltage transformation, special systems, home automation, smoke detection and fire alarm, EVAC, supervision, CCTV, sound diffusion, photovoltaic, generators, intrusion detection, data transmission and structured cabling.

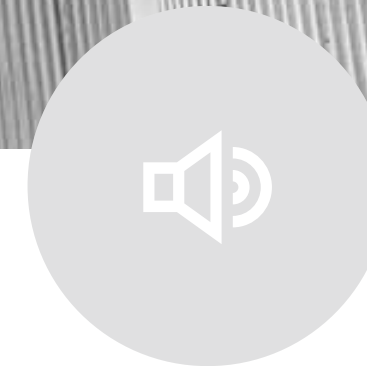

Energy Consulting

Energy Management and Energy Audits. Dabster includes in its staff an Energy Manager EGE (Energy Management Expert) and an operational team for optimizations and due diligence.

Fire fighting system

Fire prevention consultancy and design of fire sprinkler systems - smoke evacuation - fire prevention certificates.

Acoustic

Environmental and architectural acoustic design - passive acoustic requirements - acoustic climate - acoustic impact - acoustic comfort.

Safety

Workplace safety - safety in construction sites - consultancy for safety and health in workplaces - design and coordination.

BIM

We implement traditional 2D design of systems into Building Information Modeling (BIM) methodology.

Building Information Modeling

The approach to design changes completely compared to traditional technical drawing. The model constructed in the BIM environment is already complete with characteristic objects representing all the details of the designed elements.

Main utilities

Avoiding interference between different elements, continuous updating during the design and execution phases, detailed and precise computational analysis of the design, a well-defined chronological definition of installation, and the possibility of direct and immediate interaction between various design disciplines.

TEAM

 Alessandro GECHELE (Mechanical Engineer)
 Giorgio GREZZANI (Electrical Engineer)
 Marco ROSSI (Civil Engineer)

 n. 1 Civil Engineer-Architect
 n. 2 Civil Engineers
 n. 1 Construction engineer
 n. 1 Environmental Engineer
 n. 1 Architect

 n. 6 Energy Engineers
 n. 5 Mechanical Engineers
 n. 1 Chemical Engineer
 n. 1 Industrial Technician specialized in Mechatronics

 n. 1 BIM Coordinator
 n. 4 BIM Specialists

 n. 7 Electrical Engineers
 n. 2 Industrial Technicians specialized in Electrical Engineering and Automation
 n. 1 Engineer specialized in special systems

 n. 1 Marketing Manager
 n. 1 Administration Manager
 n. 1 IT Systems Manager
 n. 1 Front Office Clerk
 n. 2 Human Resources Clerks

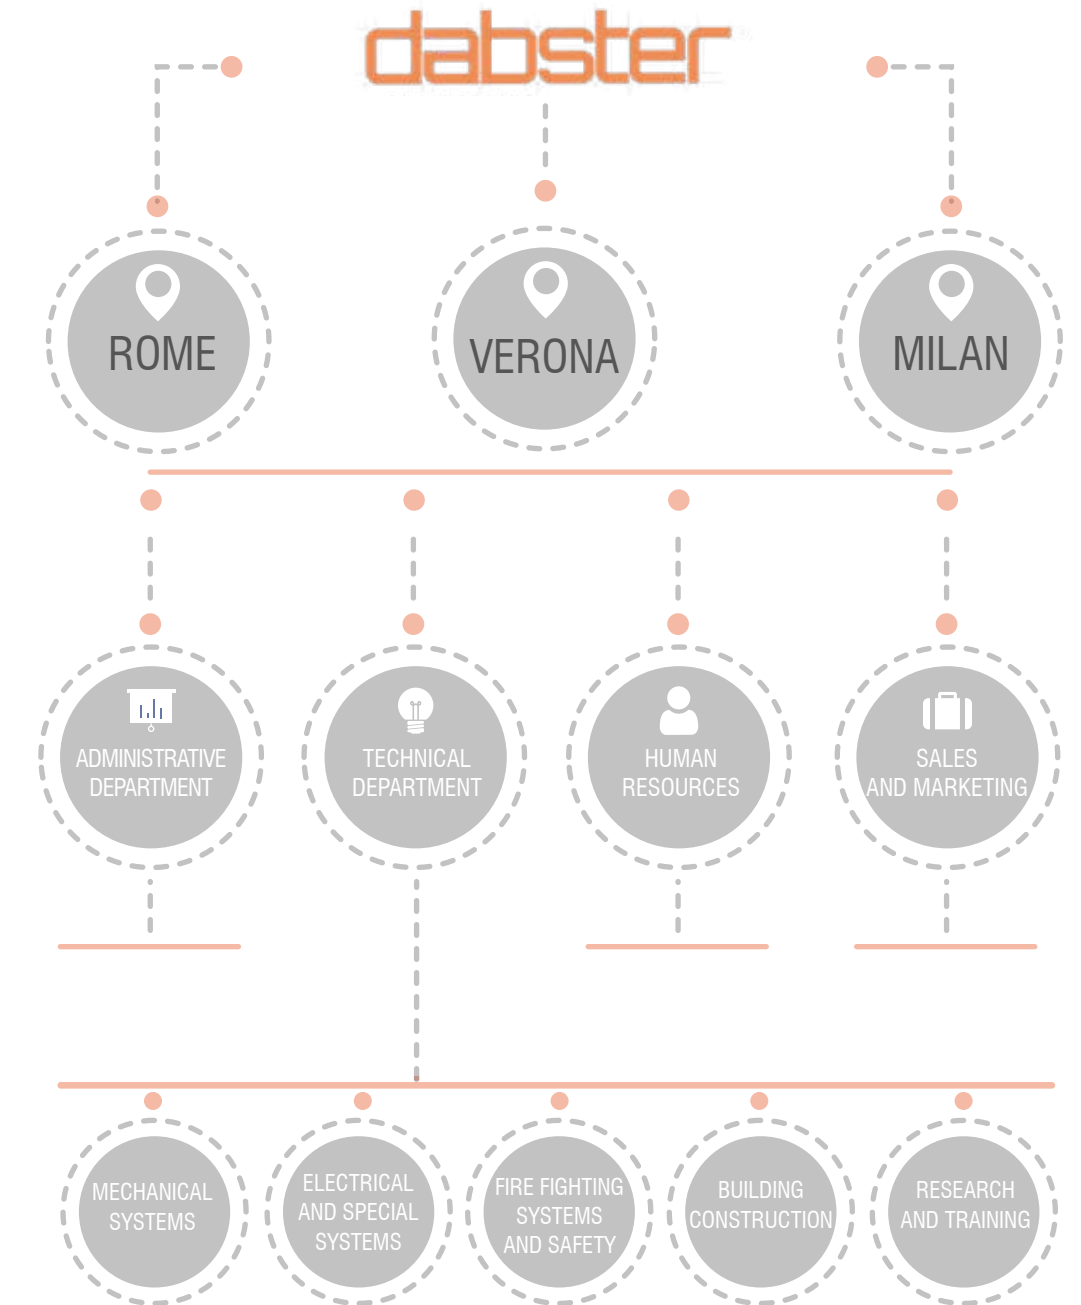

Internal Organization

Our technical team is responsible for the design at various levels of expertise and depth.

Operational Organizational Chart

From an operational perspective, each project is managed through various roles and responsibilities:

- The PROJECT DIRECTOR coordinates the involved disciplines and oversees the progress of the project.
- The PROJECT MANAGERS and SECTOR MANAGERS set the project's philosophy, draft key documents, verify design deliverables, and manage the construction phase.
- The DESIGNERS are responsible for complex graphic elaborations, calculations, and sizing.
- The DRAFTERS AND MODELERS assist the designers in creating the deliverables.

location | Verona
PASTIFICIO RANA SPA
RENOVATION OF THE SAN GIOVANNI LUPATOTO
HEADQUARTERS

- Electrical and mechanical systems final design
- Energy consulting
- Site supervision of electrical and mechanical systems
- Drafting of final as-built drawings

EXPANSION OF THE PRODUCTION PLANT
AND NEW PASTA MUSEUM IN SAN GIOVANNI
LUPATOTO

- Electrical and mechanical systems final design
- Subservices final design
- Site supervision of electrical and mechanical systems

year | 2020
location | Bussolengo (VR)
PELLINI CAFFÈ
CONSTRUCTION OF A NEW AUTOMATED
WAREHOUSE AT THE PLANT

- Mechanical and electrical systems preliminary design
- Electrical and mechanical systems final design
- Fire prevention design
- Site supervision of electrical and mechanical systems

year | 2020
location | Quinto di Valpantena (VR)
PAINT FACTORY A&B CASATI SPA
RENOVATION AND EXPANSION OF THE PLANT
LABORATORIES

- Mechanical and electrical systems preliminary design
- Electrical and mechanical systems final design
- Energy consulting

year | 2020
location | Bardolino (VR)
OIL MILL VIOLA
EXPANSION OF THE PRODUCTION AREA

- Electrical and mechanical systems final design
- Energy consulting
- Site supervision of electrical and mechanical systems

year | 2020
location | Termoli (CB)
FABBRICA ITALIANA SINTETICI
CONSTRUCTION OF A NEW MULTI-SERVICE BUILDING

- Electrical systems final design
- Mechanical systems final design

year | 2019
location | Castel d'Azzano (VR)
BAULI SPA
BAULI LEARNING CENTER

- Electrical and mechanical systems final design
- Technical consultancy for the definition of procurement documents

year | 2023
location | San Rocco al Porto (LO)
BIFFI Spa
CONSTRUCTION OF A NEW LOGISTICS BUILDING

- Mechanical systems preliminary and final design
- Electrical systems preliminary and final design
- Mechanical systems construction supervision
- Fire prevention consultancy

year | 2022-2023
location | Cavarzere (VE)
TURATTI GROUP SPA
EXPANSION OF THE PRODUCTION SITE

- Electrical and mechanical systems final design
- Site supervision of electrical and mechanical systems

year | 2023
location | Sant'Ambrogio di Valpolicella (VR)

WINNERS OF THE DESIGN COMPETITION OF THE
NEW URBAN CULTURE PARK

→ Acoustic design

From an acoustic point of view, various aspects were considered: the landscape and visual impact, the size in relation to the planimetric distribution of the elements and the attenuation effect on the propagation of the acoustic wave.

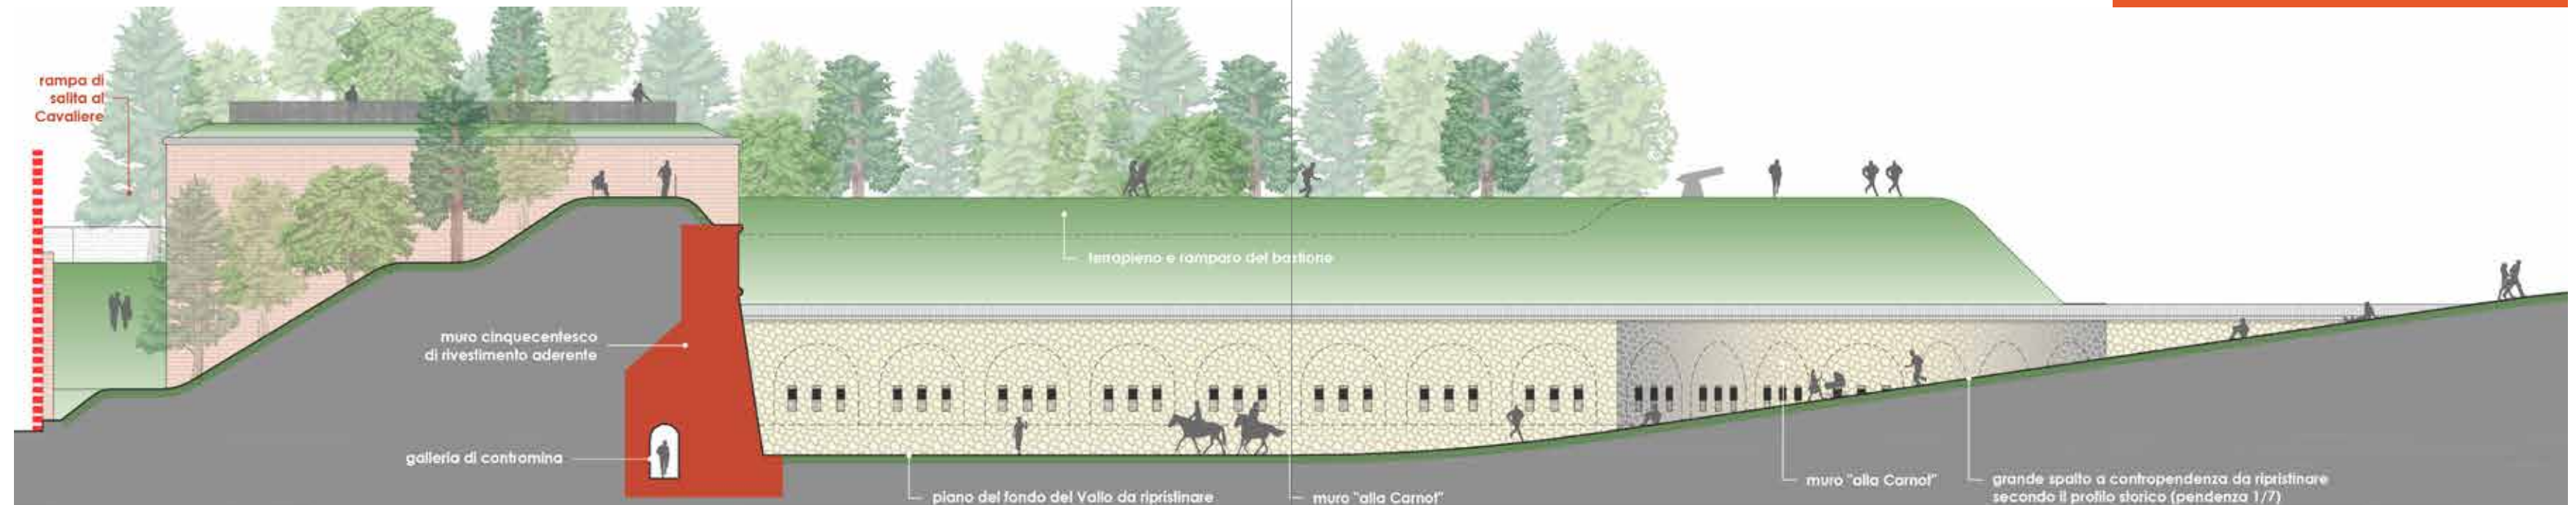

The final choices were of a mixed type: of a natural type with reinforced embankments alternating with "green wall" barriers in order to reproduce the effect of a natural barrier composed of gabions made up of a metal cage structure filled with a mixture of rocks and earth in which climbing vegetation is sown.

APAVE CERTIFICATION ITALIA SRL

VERIFICATIONS OF PUBLIC AND PRIVATE WORKS DESIGNS

→ Design checks

→ Technical control during construction phase

Since 2018 we have been operating in collaboration with Apave Certification Italia srl for the validation of public and private works projects. Dabster takes care of the energy, acoustics, system design, fire prevention and B.I.M. aspects.

The design verification, at a preliminary or final level, consists of checking the quality of the project and its compliance with current regulations and the client's requirements framework. The verification includes ascertaining the conformity of the project also with specific functional, performance, regulatory and technical provisions.

The technical control is instead carried out with the verification of the progress of the correct execution of the works, including the verification of the quality of the materials, compliance with the costs and the agreed implementation times.

Below are some projects for which Dabster has carried out the verification service.

UNIVERSITY OF SASSARI

RENOVATION OF ECONOMY DEPARTMENT HEADQUARTERS - FORMER BOTANICAL GARDEN AREA

→ Mechanical and electrical system final design verification

LOMBARDY REGION - ASST SPEDALI CIVILI
